Algoritmo – Faz Algo

Lucas Anderson Ladislau Aguiar
Lucas Prado Ribeiro

0 Algoritmo

FazAlgo

```
void FazAlgo (int n) {  
    int i, j, k;  
    FOR (i= 1; i<n - 1; i++) {  
        FOR (j= i + 1; j<= n; j++) {  
            FOR (k = 1; k<=j;k++) {  
                Algum comando de custo 0(1)  
            }  
        }  
    }  
}
```

$$C(n) = \sum_{i=1}^{n-2} \sum_{j=i+1}^n \sum_{k=1}^j O(1)$$

Complexidade

$$C(n) = \frac{1}{3}n^3 - \frac{4}{3}n$$

$$O(n^3)$$

Algoritmo para o teste

```
void FazAlgo(int n) {  
    int i, j, k;  
    long contador = 0;  
    for (i = 1; i < n - 1; i++) {  
        for (j = i + 1; j <= n; j++) {  
            for (k = 1; k <= j; k++) {  
                contador++;  
            }  
        }  
    }  
  
    printf("%ld\n", contador);  
}
```

```
void FazAlgoOtimizado(int n) {  
    int i, j, k;  
    long contador = 0;  
    for (i = 1; i < n - 1; i++) {  
        for (j = i + 1; j <= n; j++) {  
            contador+=j;  
        }  
    }  
  
    printf("%ld\n", contador);  
}
```

Testes – Faz Algo $O(n^3)$
